Differential Equations
Linear Algebra
Analysis of Algorithms
Statistics

PROJECTS

Nightly — IOS App

An app to help users complete their nightly inventory, a tool of self improvement and introspection. Identify character defects and make corrective measures to improve them.

ANTISA Supporting Forensic Nurses Helping Sexual Assault Victims — Capstone Project

A web application tool to help guide nurses through the decision tree of the questions and a resulting diagnosis.

CRM Insights — Cognitive Scale Intern Project

The program scrapes the web for news related to companies in an asset manager's mutual fund, assigns sentiment score and financial advisor's clients' exposure score.

Enigma — Python Project

Hypertext horror game developed with Ren'Py. Decision tree based storyline, where choices determine what outcome the player receives.
